

Jacky Liang

Computer Science Student

778-798-7128 | jackyliang1128@gmail.com | linkedin.com/in/jackyliang-/

EDUCATION

Bachelor of Computer Science, *University of British Columbia*

Sept 2024 – May 2028

Bachelor of Applied Science in Mechanical Engineering, *University of British Columbia*

Graduated 2023

TECHNICAL SKILLS

Languages: Java, JavaScript, HTML/CSS, Python, PHP, SQL

Frameworks/Libraries: React, Node.js, Express, Prisma, Phaser, JUnit, Jest, Playwright

Tools: PostgreSQL, AWS, Azure, Docker, Git, Oracle, Bitbucket

EXPERIENCE

Full Stack Developer, *BC Liquor Distribution Branch*

Jan. 2026 – Aug. 2026

- Developed web features for BCLDB's Drupal platform using PHP, PostgreSQL, and Azure App Service, supporting 3 enterprise web applications and a miniOrange authentication integration
- Designed reusable CI/CD workflows for Drupal and Spring Boot applications to automate builds, testing, and deployments across 3 environments, reducing manual deployment steps and standardizing enterprise releases
- Engineered automated Drupal deployment workflows using GitHub Actions and Azure OIDC, reducing expected production deployment downtime from 4 hours to 30 minutes

Software Development Engineer in Test, *OnTraccr Technologies*

Sep. 2025 – Dec. 2025

- Developed automated backend test suites with Jest and end-to-end UI tests using Playwright to assist with analyzing bugs, identifying edge cases, providing detailed Jira reports, and performing PR reviews
- Integrated test suites into the Bitbucket CI/CD build and deployment pipeline, enabling automated regression checks on every build, reducing production defects, and supporting continuous delivery practices
- Collaborated in sprint planning and daily stand-ups to define critical QA testing tasks and scope product features

Undergraduate Teaching Assistant, *University of British Columbia*

Jul. 2025 – Current

- Facilitated lab sessions and office hours by guiding students through Java programming exercises, object-oriented design, and debugging practices to strengthen understanding of core software development concepts
- Reviewed and provided feedback on student code submissions, ensuring adherence to best practices, supporting unit testing and modular design, and collaborating with course staff to improve instructional materials and learning outcomes

Design Engineer, *FPS Food Process Solutions*

Nov. 2023 – Sep. 2024

- Led the design of industrial fryer systems, collaborating with international engineering teams and suppliers to refine requirements, resolve design trade-offs, and ensure reliable manufacturability and production outcomes
- Produced detailed CAD models and technical drawings, supporting consistent assembly, performance verification, and cross-functional review processes with production staff

PROJECTS

Loyalty Rewards Platform | *React, Node.js, Express, Prisma*

- Built a full stack loyalty platform for salons to reward customers, manage loyalty programs, and streamline employee point tracking and reward redemption
- Designed relational data models and REST APIs with Prisma and PostgreSQL to support customer accounts, point transactions, rewards, and business operations
- Implemented JWT authentication and role-based authorization for distinct admin, employee, and customer workflows

Return to the Office | *JavaScript, Phaser 3*

- Developed a browser-based roguelike survival game with modular Phaser scenes, player and enemy entities, boss encounters, and configurable gameplay systems
- Implemented reusable upgrade and combat systems supporting auto-targeting, projectile behaviors, enemy interactions, XP progression, and escalating difficulty

Outdoor Activity Management System | *Java, SQL, Oracle*

- Built interactive UI panels that allow users to view, update, and manage hiking trails, campsites, weather logs, and trip records through an intuitive interface, enabling them to document and organize outdoor experiences
- Implemented Java backend CRUD operations that connected UI panels to the Oracle database and enforced data integrity through input validation and constraint checks, ensuring consistent and reliable user data management

FitTrack | *Java, JUnit, Swing, Git*

- Architected a fitness app using an object-oriented domain model that allows users to record activities, track progress, personalize workout plans, and visualize results through dynamic graphs
- Created comprehensive JUnit tests covering core data logic, edge cases, and exception handling, achieving full code statement, branch, and function coverage across multiple updates
- Implemented JSON-based persistence to serialize and deserialize user activity data, allowing the application to reliably load and save workout history for seamless continuity across sessions
